

ABDULMAJEED ABDULLAH ALQITHMI

Business Analyst | Technical Business Analyst
Abdulmajeed.17@outlook.com | +966 56 356 0477 | [LinkedIn: Abdulmajeed Alqithmi](#)

PROFESSIONAL SUMMARY

Business Analyst with a BSc in Computing with Business and hands-on experience spanning the full software development lifecycle, from requirements elicitation through UAT. Skilled in stakeholder communication, process analysis, and functional documentation, with a technical foundation that supports direct collaboration with engineering teams and accurate translation of business needs into system requirements. Independently led business analysis and end-to-end delivery of a full-stack HR Management System, from requirements gathering and process design through testing and deployment. Proficient in Power BI, SQL, and Excel for data-driven decision support. IBM-certified Business Analyst.

CORE COMPETENCIES

Business Analysis: Requirements Elicitation & Documentation, Business Process Analysis & Improvement, Gap Analysis, Functional Specifications, Use-Case Modeling, UAT & Functional Testing

Stakeholder & Project Management: Stakeholder Communication, Meeting Facilitation, Cross-Functional Collaboration, Agile Methodologies, Issue Tracking & Resolution, Project & Task Coordination

Data & Reporting: Data Analysis & Visualization, KPI Dashboards & Reporting, Decision Support

TECHNICAL SKILLS

Data Analysis & BI Tools: Power BI, SQL, Microsoft Excel

Systems & Development Knowledge: Java (Spring Boot), HTML, CSS, JavaScript, RESTful API Design, MySQL, Relational Database Design, JWT Authentication, Role-Based Access Control (RBAC)

SDLC & Delivery Practices: SDLC, System Design, UI/UX Fundamentals, Testing & Validation, Deployment

WORK EXPERIENCE

Business Analyst Intern

Jan 2025 – Jan 2026

Advance Knowledge Gate | Jeddah, Saudi Arabia

- Led requirements-gathering efforts across 5+ client and stakeholder workshops, capturing business needs, clarifying scope, and reducing rework through clear documentation.
- Documented and translated 30+ business requirements into actionable specifications, improving requirement clarity and enabling accurate implementation by the engineering team.
- Acted as liaison between clients and developers during requirement discussions and system demonstrations, ensuring business needs were clearly understood and addressed.
- Partnered with development teams to translate business requirements into functional system components, ensuring delivered features aligned with stakeholder expectations.
- Executed functional testing and UAT across multiple system modules, validating alignment with business requirements prior to deployment and reducing post-release defects.
- Analyzed and helped resolve 15+ user-reported issues by gathering stakeholder feedback, improving system functionality and overall user experience.
- Tracked 10+ project tasks and feature implementations across cross-functional teams, supporting clear communication and on-time delivery.

PROJECTS

HR Management System (HRMS) — Full-Stack Web Application

Independent End-to-End Project | Technologies: HTML, CSS, JavaScript, Java Spring Boot, MySQL, RESTful APIs, JWT Authentication

Role: Sole owner of business analysis, system design, UI/UX design, development, testing, and deployment

- Identified common HR operational challenges — manual attendance tracking, fragmented leave approvals, and limited workforce visibility — and defined the business case for a centralized HRMS platform spanning 6+ integrated modules.
- Owned end-to-end requirements analysis as sole business analyst on the project, documenting 30+ functional requirements and producing use-case diagrams and process flows to guide system design.
- Analyzed the needs of distinct user groups (Admin, HR, Department Managers, Employees) and translated those needs into role-based access control (RBAC) reflecting realistic organizational workflows.
- Mapped attendance, payroll, and multi-level leave-approval workflows end-to-end, translating business process logic into system rules across a normalized database and RESTful backend (20+ endpoints).
- Designed a centralized notification center to close communication gaps identified during process analysis.
- Evaluated what KPIs and reports would matter most to HR and management decision-makers, then designed an interactive workforce analytics dashboard that turned operational data into actionable business insight.

EDUCATION

Bachelor of Science — IT, Computing with Business

May 2020 – July 2025

Arab Open University | Jeddah, Saudi Arabia

Relevant coursework: Business Systems Analysis, Database Design, Software Engineering, Project Management, Information Systems.

TRAINING, CERTIFICATIONS & LANGUAGES

- IBM Business Analyst Professional Certificate — IBM / Coursera
- Cyber Security CTF Camp — Google Developer Student Clubs & Cyber Security Club, Arab Open University
- Management of Restaurants & Cafes — King Abdulaziz University

Languages: Arabic — Native | English — Professional Working Proficiency
